DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 4-11, drawn to a method of making an emissive plastic optical fiber, classified in class 438, subclass 31.
- II. Claims 1-3 and 12-16, drawn to a device comprising a plastic optical fiber, classified in class 385, subclass 100.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case (2) the fiber can be made by spinodal decomposition as opposed to mixing a reactant with a monomer for phase separation.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2883

Invention II contains the following patentably distinct species of the claimed invention:

Species A, drawn to an emissive plastic optical fiber, Figures 2a-3b, Specification [0014].

Species B, drawn to a backlight comprising a plurality of plastic optical fibers of constant length and arranged in intimate contact with each other in a line, Figure 5, Specification [0018].

Species C, drawn to a backlight comprising a plurality of plastic optical fibers of constant length but not arranged in intimate contact with each other in a line (see claim 16).

Species D, drawn to a backlight comprising a plurality of plastic optical fibers arranged in intimate contact with each other in a line but not of constant length, Figure 5, (see claim 16).

Applicant is required under 35 U.S.C. 121 to elect invention I or a single disclosed species from A-D of invention II for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 1 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim

is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 2883

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
